

How avoiding that your keys be lifted, improperly used and reinserted into your security key-ring?

RFID secure key-ring

Once inserted in this robust security key-ring – having stainless steel cable-style self-locking system - keys cannot be taken off if not breaking the wire.

In this case, **RFID radio frequency identification with anti-tamper feature will record tampering and will give controllers evidence of it**, when the keychain will be automatically read on returning to the operational site.

Provide your customers operating
in the supervision and security services
with the simplest and definitive electronic solution
against misuse of the keys!
