# **THERMAL PALLET COVERS**

**PROTECTION – CONTROL - IDENTIFICATION – TRACKING**

LeghornGroup thermal pallet covers are an investment that generates a profit when using them over the years.

These insulating freight cover are the most reliable if you are looking for the temperature stability.

We only use the finest materials, with assembling techniques that provide the best isolation results.

For all our main products, we are using VMPET(surface), it is stronger than pure Aluminium. Between VMPET and Aluminium, there is our multi layer high polymer EPE, characterised by the absence of glue between layers and it is environment friendly. Thermal conductivity: 0.028~0.035w/m.k

In order to create thermal pallet covers, our adopted solution ensures that the cover insulating qualities remain consistent with the requests.

They operate in a simple way : during winter, the thermal pallet covers trap the heat allowing temperatures to remain stables, above freezing, during the shipment for longer periods of time.

In summer, with high temperatures, the layer of film is optimised for reflecting infrared radiations and keeping an optimal temperature for all the period of shipment

**THERMAL PALLET COVERS** provide a cost-effective solution for protecting entire pallets of product.

**Why do you insulate individual boxes when you can insulate the entire pallet?**

Basically, our solutions are broadly used for protecting the perishable alimentary products.

With LeghornGroup pallet cover, pallets of fruit and vegetables are protected from any environmental stress.

Preserving the “cold chain” in each stage of fragile cargo handling is a key factor in order to maintain the freshness of the products.

LeghornGroup has realized thermal pallet covers to protect the perishable products as fruit and vegetables from thermal shock or from any other external agent like light, water and dusts during short shipments.

This pallet cover is composed of a practical lid, easy to put and remove and it is at a low cost. It ensures that the quality of the goods remains unchanged if they are stored in unapproved environments.

As regards the medicinal products transport sector, not only do the needs of pharmaceutical companies include the distribution of their products on the national territory, but also abroad. This is due to the globalisation and the growing need for specific medication in many parts of the world.

Moreover, the goods are sent undamaged and in short-terms in order to be regularly used by the addressees.

The thermal pallet covers with controlled temperature, used in the medicinal products transport sector, are capable of maintaining a temperature of  $+2^{\circ}$  to  $+8^{\circ}\text{C}$  over a maximum period of 36 hours.

It is possible to extend the packaging hours of autonomy according to the amount of refrigerant elements inserted in the pallet cover.
